

# CE 383 STRUCTURAL ANALYSIS

2012 Spring Semester

RECITATION NO:2

O.1) For the frame with EI constant as shown, calculate the horizontal displacement  $\Delta_{CH}$  at C and the vertical displacement  $\Delta_{DV}$  at D by the unit dummy load method using either integrals or given chart.

| Segment | Origin | M                    | $m_h$               | $m_v$         |
|---------|--------|----------------------|---------------------|---------------|
| EB      | E      | $-2x$ ✓              | $-(4+x)$            | 0             |
| BD      | B      | $-8 + \frac{13x}{3}$ | $-8 + \frac{4x}{3}$ | $\frac{x}{2}$ |
| DA      | A      | $\frac{5x}{3}$       | $-\frac{4x}{3}$     | $\frac{x}{2}$ |

$$\begin{aligned}
 EI \Delta_{CH} &= \int_0^4 -(-2x)(4+x) dx + \int_0^3 \left(-8 + \frac{13x}{3}\right) \left(-8 + \frac{4x}{3}\right) dx + \int_0^3 -\frac{20x^2}{9} dx \\
 &= \int_0^4 8x dx + \int_0^4 2x^2 dx + \int_0^3 64 dx - \int_0^3 \frac{136x}{3} dx + \int_0^3 \frac{32x^2}{9} dx \\
 &= 4(x^2)_0^4 + \frac{2}{3}(x^3)_0^4 + 192 - \frac{136}{6}(x^2)_0^3 + \frac{32}{27}(x^3)_0^3 \\
 &= 64 + \frac{128}{3} + 192 - 204 + 32 = \frac{380}{3} \rightarrow \Delta_{CH} = \frac{380}{3EI} \leftarrow
 \end{aligned}$$

$$\begin{aligned}
 EI \Delta_{DV} &= \int_0^3 -4x dx + \int_0^3 \frac{13x^2}{6} dx + \int_0^3 \frac{5x^2}{6} dx \\
 &= -\frac{4}{2}(x^2)_0^3 + \frac{13}{18}(x^3)_0^3 + \frac{5}{18}(x^3)_0^3 \\
 &= -18 + 13 \cdot \frac{3}{2} + 5 \cdot \frac{3}{2} = -18 + 27 = 9
 \end{aligned}$$

$$\Delta_{DV} = \frac{9}{EI} \downarrow$$

O.1) For the frame with EI constant as shown, calculate the horizontal displacement  $\Delta_{CH}$  at C and the vertical displacement  $\Delta_{DV}$  at D by the unit dummy load method using either integrals or given chart.

$$6V_C = 2 \times 4 + 6 \times 3 = 26 \Rightarrow V_C = \frac{13}{3} \text{ kN}$$

$$\Rightarrow V_A = \frac{5}{3} \text{ kN}$$

$$EI \Delta_{CH} = \frac{(4)(-8)(16+4)}{6} + \frac{(\frac{24}{13})(-8)(\frac{72}{13}+16)}{6}$$

$$- \frac{(\frac{15}{13})(5)(8+\frac{72}{13})}{6} - \frac{(3)(5)(4)}{3}$$

$$= 106.67 + 53.01 - 13.01 - 20$$

$$= 126 \frac{2}{3} \Rightarrow EI \Delta_{CH} = \frac{380}{3} \leftarrow$$

$$EI \Delta_{DV} = \frac{(3)(\frac{3}{2})(5)}{3} + \frac{(\frac{15}{13})(5)(3+\frac{12}{13})}{6} - \frac{(\frac{24}{13})(8)(\frac{12}{13})}{6}$$

$$= 7.5 + 3.772 - 2.272 = 9$$

$$\Delta_{DV} = \frac{9}{EI} \downarrow$$
